

# THE HUSH KIT

Firearm Sound Suppression System

## INTRODUCING AT SHOT SHOW 2025: DILLON RIFLE COMPANY'S LINE OF FIREARM SOUND SUPPRESSION SYS- TEMS | THE HUSH KIT.

Dillon Rifle Company (DRC) is an affiliate to Dillon Aero, who in 2024 collaborated with Centre Support Services (CSS) to develop a highly effective suppressor for the M134 Minigun using their patented technology Purposely Induced Porosity™. The results of that effort can be viewed here:

[\[click to watch video\]](#)

Based on the success of that effort, Dillon Rifle Company and Centre support Services designed a new generation of rifle suppressors using the same technology that worked so well for the Minigun. We figured if Centre's PIP technology could make the M134, the world's loudest small caliber weapon system, hearing safe it should do wonders for an AR or bolt gun.

We call it the Hush Kit.

### Hush Kit Establishes a New Standard in Sound Suppression

The Hush Kit is an innovative 3D-printed design based on Purposely Induced Porosity™ technology. The advanced PIP technology allows for precise calibration of strength, density, and thermal properties, offering unparalleled control over gas expansion.

This allows for an increased level of noise reduction

ranging from 5 and 15db quieter than existing market leading 5.56 suppressors.

### Designed for Professionals

We engineered the Hush Kit with a maximum length of 5.125 inches, about 20% shorter than all other suppressors in its performance class. This allows for easier handling and obstacle clearance in tight quarters.

Our suppressor's construction features an intensely strong 'monolithic body-to-core' structure. This ensures a long-life span and high thermal resistance. The Hush Kit's full-auto rating underscores its capability to withstand intensive use, while its direct thread adapter ensures compatibility and ease of attachment.

### Hush Kit: Suppression for Everyone

The unique and robust 3D-printed structure ensures a quieter, more efficient shooting experience, ideal for both professional and recreational use. The Hush Kit series includes 5.56mm, .50BMG, with 9mm and 7.62mm to follow in early 2025.
